

# JMV AVIATION

End of service does not mean end of life

**JMV Aviation** with corporate headquarters since 2006 in Capellen, Luxembourg is a company specializing in:

- Aircraft Trading
- Aircraft End of Life Management
- Engine Trading
- Engine End of Life Management
- Inventory Management
- Components Trading
- Consultancy Services in Relation with Aircraft Maintenance
- Aircraft Disassembly and Recycling
- Logistic Services

JMV is fully owned by **Vallièrre Aviation**, one of the European leaders in aircraft end of life management.

**The Aircraft Trading** is a complicated process, one that requires a broad spectrum of knowledge, experience that comes along with highly customized solutions that we specialized in at **JMV**.

**JMV Aviation** is a founding member of the **AFRA** (Aircraft Fleet Recycling Association), an International Association to improve aircraft industry sustainability by promoting safe and environmental proactive management of the world's aging aircraft fleet:

- safe and economical return of aircraft to revenue service,
- safe return of engines and parts to the world fleet,
- safe return of reclaimed materials back into the commercial manufacturing.

Some of the AFRA members: Boeing, Pratt & Whitney, Baron Group, Milled Carbon, Rolls Royce, Châteauroux Air Center...

**The environmental challenge** consists first and foremost of preventing the accumulation of wrecks. The work of **AFRA** has shown that the professionalization of reusing planes' spare parts is fundamental for their recycling. The more profitable this process proves, the less often planes will be abandoned.

**JMV Aviation**, thanks to its Vallière Aviation associate expertise, is the first European Company prevailing upon Part disassembly accreditation.

## Aircraft acquisition and recycling process

## ***Our Customers Include***

A large cargo aircraft is silhouetted against a sunset sky. The aircraft is positioned on a tarmac, and its reflection is visible in a body of water in the foreground. The scene is dimly lit, with the primary light source being the setting sun, which creates a warm glow and long shadows.
